

You're Looking at an On-Site, Environmental Solution.

But No Ordinary Solution.

For more than 10 years, other environmental companies studied ways to neutralize and stabilize 60,000 cubic yards of organic hazardous waste at this refinery landfill.

Today, OHM Remediation Services Corp. is on site. We moved a treatment technology from the laboratory into the field. And we are getting the desired results.

We designed an innovative solution at the lowest qualified cost. And provided an experienced project team. Extensive safety design. Engineering services. In-house fabrication of the full-scale process plant. Procurement, construction, and plant operations. And on-site sampling and analytical services.

OHM's six offices and response centers in the West are backed by a nationwide network of 24 other locations. Presently, we are treating groundwater, soil, and facilities on an emergency and planned basis for clients in the refining, chemicals, manufacturing, transportation, and semiconductor industries.

OHM Remediation Services Corp. One of the nation's largest on-site environmental remediation companies and a major emergency response contractor. Where people, equipment, and technologies combine to produce the desired results.

OHM Remediation Services Corp.
