

# Practical Military Remediation for Department of Defense Facilities

**OHM Remediation Services Corp.** has successfully executed more than 1,500 delivery orders under federal term contracts, and more than 150 site-specific federal remediation projects. Our 26 years of hands-on, field-proven experience enables us to employ a *practical* perspective to ensure the most *cost-effective solution*. And, our broad-based technology options meet the DOD's technical and site requirements for remedial actions.

**Cost-effective military remediation was completed through full-scale application of OHM's proprietary fluid injection with vacuum extraction process at the Sacramento Army Depot Burn Pits Operable Unit.**

| Key DOD Technical and Site Requirements    | Example of Cost-Effective Remediation Technology Application                             |
|--|--|
| Waste segregation and disposal             | DLA Arctic Surplus Site immediate removal, Fairbanks, Alaska                             |
| Unexploded munitions/ordnance area cleanup | 7,600-acre range clearance and UXO mapping, Fort Meade, Maryland                         |
| Radioactive waste area remediation         | Buried drum and LLW soil removal, Chemical Disposal Site, Ames, Iowa                     |
| Selective excavation                       | Precise burial trench excavation, Pole Line Road Project, Fort Richardson, Alaska        |
| Underground storage tanks                  | Decontamination/removal of 100 USTs and piping at Midway Island Naval Station            |
| Thermal treatment                          | Incineration of 2,500 tons of PCB-contaminated soil, Twin Cities Army Ammunition Plant   |
| Air sparging                               | Installation of 73 sparge wells and horizontal SVE trenches, Navy site, Brunswick, Maine |
| Building decontamination                   | Fast-tracked decontamination of defense equipment/structures, Naval facility, Virginia   |
| Advanced soil vapor extraction             | Fluid injection with vacuum extraction for two burn pits, Sacramento Army Depot          |
| Horizontal vapor extraction                | VOC removal using SVE at a major Superfund site, Colorado                                |
| Product recovery                           | JP-4 jet fuel recovery system, Wright-Patterson Air Force Base                           |
| Bioremediation                             | Soil washing/bioslurry reactor system for wood preserving wastes, Mississippi            |
| Stabilization                              | Stabilization of 22,000 tons of lead- and heavy metals-contaminated soil, Wisconsin      |
| Explosive residues treatment               | TNT/DNT/RDX groundwater remediation at an ordnance demilitarization site                 |
| Waste burial pit remediation               | Slurry wall installation; soil solidification, groundwater treatment at a chemical plant |

# From Sea

Selective Excavation/Separation/Screening of CWM Disposal Area, Fort Richardson, Alaska

UST/AST/Pipeline Remediation, Naval Air Facility, Midway Island

From Midway Island to Homestead AFB to Fort Richardson Alaska, from Sacramento Army Depot to Twin Cities Army Ammunition Plant to NAS Brunswick Maine— At these and many other places in our beautiful nation, OHM and its team partners are proud to serve under our nation's military services— proving that successful military remediation can be cost-effective for the taxpayer.

The tide has turned. A new wave of fiscal constraint means that every environmental restoration cleanup dollar must count toward the mission. OHM has been on the frontlines of successful on-site field remediation for 26 years. We have 17,000 large and small actual cleanups under our belt and over \$90 million in pre-deployed specialized remediation equipment and facilities— located close to you. OHM's strategically placed remedial term contracts meet Installation Commanders' cleanup needs for Defense Environmental Restoration remediation. Our personnel and our SB/SDB partners are already in place near many major active installations and BRAC bases. When you need quality and safety, on time and within budget, count on OHM.

Extraction/Treatment/Reinjection of Ordnance-Contaminated Groundwater at Site F, Naval Submarine Base, Bangor, Washington

Fluid Injection/Vacuum Extraction at Burn Pits Operable Unit, Sacramento Army Depot, California
