

Lee Farm Superfund Site

OHM Corporation: Experienced Environmental Solutions for the Midwest

OHM Corporation

16406 U.S. Route 224 East
Findlay, Ohio 45839-0551
1•800•537•9540

Stabilizing 22,000 tons of lead-contaminated soil and materials at the Lee Farm Superfund Site in Wisconsin. Decontaminating a steel coking plant in Ohio. Responding to an oil spill on the Monongahela River in Pennsylvania. Treating wastewater and sludge for a manufacturer in Kentucky.

OHM Corporation wasn't just founded in the Midwest. We work here. On more than 5,000 environmental projects in the Midwest alone over 22 years.

And we work across the United States from 30 offices and response centers. Headquartered in Findlay, Ohio, OHM Corporation is one of the largest on-site environmental remediation companies in the nation. And a leading emergency response contractor.

In the Midwest, OHM's five response centers treat groundwater, soil, and facilities—on an emergency and planned basis—using thermal, biological, and physical technologies. All backed by a \$70 million equipment inventory, custom fabricating facilities, and treatability laboratories.

OHM Corporation.
We provide experienced environmental solutions for the Midwest—and the rest.
