NECESSARY
IF MAILED
IN THE
UNITED STATES

“OHM believes the real answer to hazardous substance/waste problems is the on-site destruction of such materials—once and for all.”

WE'RE PROGRESSIVE

As an industry leader in hazardous substance/waste containment, recovery, treatment and mitigation, OHM utilizes all emerging technologies in responding to emergency or remedial situations.

OHM is an innovative firm specializing in the implementation of state-of-the-art hazardous waste treatment and handling techniques.

It is our conviction that hazardous wastes, need not be transported long distances to waste disposal sites. Rather, they can be effectively treated on site.

OHM's proven on-site treatment systems not only minimize cost; they eliminate attendant liability concerns as well.

With the existing and planned enactment of more stringent laws limiting landfill disposal and increasing hazardous waste taxes, the argument for on-site treatment becomes even more persuasive.

WE'RE EXPERIENCED

Since 1969, OHM has established an impressive project track record with satisfied clients, both large and small. We have completed thousands of hazardous substance/waste cleanup projects for a variety of industrial firms, private businesses and governmental agencies throughout the United States and Canada.

OHM's staff of professionals is always available to visit your site, assess the situation and provide consultation and remedial services.

Our engineers, chemists, hydrologists, micro-biologists and other skilled technicians have acquired years of invaluable know-how by implementing hazardous substance/waste containment, recovery, treatment and mitiga-

tion techniques. Their knowledge of hazardous materials solutions is unsurpassed.

OHM offers a **turn key** approach to modern-day hazardous waste management, providing any one or all aspects of the required remedial actions. OHM's total scope of environmental services includes:

- Environmental consulting and site assessment
- Sampling and analytical laboratory services
- On-site environmental treatment equipment: design, engineering and fabrication
- Subsurface product recovery and treatment
- Groundwater/aquifer restoration
- Biological degradation
- Facilities decontamination of PCBs, low-level radioactive waste, pesticides, and other toxic substances
- The OHM MUST PROGRAM (Management of Underground Storage Tanks)
- Explosives/reactives handling
- Hazardous waste site cleanup
- Surface impoundment cleanup/closure
- 24-hr. Emergency response to environmental incidents

For further information about our unique services call us any time of the day or night.
